SIDDHARTH RAJAWAT

Associate Product Engineer | AI & Data-Driven Systems

Jaipur, Rajasthan 302017 • +91 7818042411 • srajawat.dev@gmail.com • linkedin.com/in/siddharthrajawat

PROFESSIONAL SUMMARY

Pre-final year B.Tech student in Artificial Intelligence and Data Science at Vivekananda Global University (2027 batch) with proven experience architecting full-lifecycle data pipelines, REST APIs, and predictive machine learning models. Built and deployed end-to-end analytical platforms combining time-series forecasting, NLP sentiment engines, and interactive dashboards. Adept at translating product requirements into reliable software automation, resolving upstream API integration issues, and optimizing high-throughput data processing workflows aligned with scalable digital advertising and marketing technologies.

TECHNICAL EXPERTISE

Core Languages:	Python, SQL, C++, Go, JavaScript, HTML5/CSS3, R
Frameworks & Libraries:	FastAPI, Streamlit, Scikit-learn, TensorFlow, Pandas, NumPy, Statsmodels
Databases & Architecture:	PostgreSQL, MySQL, Database Management Systems (DBMS), Data Structures & Algorithms (DSA), RESTful APIs
Data & Analytics:	ETL Pipelines, Exploratory Data Analysis (EDA), Time-Series (ARIMA/Prophet/LSTM), NLP, Tableau, Power BI, Excel
Dev & Quality Engineering:	Git/GitHub, Linux/Bash, API Integration & Error Handling, Data Quality Assurance, Agile Sprints

PROFESSIONAL EXPERIENCE

Amdox Technology Pvt. Ltd — **Data Analyst & Product Intern (Remote)** March 2026 – June 2026

- Automated validation, aggregation, and ETL workflows across **4 critical business datasets** using Python and SQL, eliminating manual cleaning steps and improving reporting reliability for cross-functional stakeholders.
- Engineered and deployed interactive Tableau reporting suites tracking operational KPIs, directly reducing repetitive analytical overhead and accelerating cross-team decision turnaround.
- Identified and resolved production data pipeline bottlenecks, including third-party API rate-limit errors (CryptoPanic/Yahoo Finance) and schema inconsistencies, maintaining high pipeline stability.
- Partnered directly with cross-functional product leads to gather business logic requirements and translate them into actionable schema designs and visual dashboard metrics.

SkillCraft Technology — **Machine Learning Intern (Remote)** June 2025 – July 2025

- Trained, tuned, and evaluated predictive classification models using Python and TensorFlow for automated decision-making.
- Conducted systematic Exploratory Data Analysis (EDA) and feature selection routines, enhancing model accuracy and reducing training latency across diverse data distributions.
- Collaborated in agile sprint cycles to benchmark model performance, document pipelines, and review code for production readiness.

KEY ENGINEERING PROJECTS

CryptoLens Analytics Platform
Python • Streamlit • LSTM • Prophet • REST APIs
Engineered an end-to-end analytics platform ingesting real-time market metrics and news feeds. Built an automated forecasting pipeline with VADER sentiment analysis, robust API error handlers, and interactive UI views.

Customer Churn & Retention Engine
Python • Scikit-learn • Pandas • Feature Engineering
Constructed a predictive churn classification model utilizing customer engagement signals. Optimized precision and recall via hyperparameter tuning to help prioritize retention campaigns and minimize user drop-off.

Sales Funnel & Ad Performance BI
SQL • Power BI • Python • Relational Data Modeling
Created an automated BI tracking dashboard modeling multi-channel sales conversions. Designed parameterized SQL queries and aggregated views to minimize dashboard latency on large relational transaction tables.

Predictive Diagnostic Classifier
Python • Scikit-learn • Data Cleaning & QA
Implemented an automated classification system applying data preprocessing, outlier removal, and standardized feature scaling across clinical parameters to deliver fast, reproducible risk assessment scores.

EDUCATION

Vivekananda Global University (VGU), Jaipur, Rajasthan — Expected Graduation: June 2027

Bachelor of Technology (B.Tech) in Artificial Intelligence and Data Science | Batch: 2027

Relevant Coursework: Data Structures & Algorithms (DSA), Database Management Systems (DBMS), Object-Oriented Programming, Operating Systems, Machine Learning, Python Programming, Data Mining, Statistics.
